

HIS Envoys Faith-Based Dividend Growth Model

A PORTFOLIO THAT FOCUSES ON ALIGNING AN INVESTOR'S FAITH AND BIBLICAL BELIEFS

Model Objective

The model seeks capital appreciation and dividend income through investments that are aligned with an investor's faith and Biblical beliefs.

Investment Focus: Seeks long term growth by investing in companies and ETF's that have a high relative strength trend.

Seeks to reduce equity market volatility with positions that historically have lower volatility when equity markets come under pressure.

Suitability

Investors that seek long term capital appreciation.

Investors that are comfortable with investments in common stock.

Investors who would like active portfolio management to minimize risk.

Investment Strategy

The model's strategy employs a multi-step process to derive investments in the fund portfolio. HIS Envoys first screens for companies that meet its faith-based standards. That list is then filtered for companies that have increased their dividend over time and exhibit strong fundamentals. Remaining companies are then ranked by relative strength. Investments are made in those companies that exhibit a positive relative strength trend and are outperforming their peers.

Expanded Insight

HIS Envoys Faith-Based Dividend Growth model seeks to invest in companies that align an investor's faith and Biblical beliefs while participating in the long-term growth of equity investments. We apply faith-based screening methodology to screen for companies that allow investors to be good stewards of what they have been entrusted with and to have a positive kingdom impact, while avoiding companies that fall short of Faith-based standards.

As stated in the strategy, the model employs a multi-step process to arrive at the companies to invest in. The process begins by screening for companies that have been growing their dividend. Dividend growth may be an indicator of a company's health. The dividend growers are then submitted through our faith-based screening process. Those companies that do not violate key principals are then ranked by the momentum of their stock price utilizing our relative strength scoring system. The model seeks to own and hold stocks that exhibit positive relative strength trend

and are outperforming their peers at the time of purchase. Furthermore, the HIS Envoys Faith-Based Dividend Growth model seeks to mitigate downside risk by selling companies that no longer exhibit positive relative strength trend, have reversed momentum or break key support levels in the market. We seek to replace the weakening companies with companies or asset classes that are in favor, improving in favor or demonstrate a positive relative strength trend.

Fundamental Screening Process and Holdings Attributes

HIS Envoys Faith-Based Dividend Growth model examines company fundamentals as a gauge of their health by screening for companies that currently pay a dividend and grow their dividend over time. We believe that companies that grow their dividend are generally well-established companies that have strong profit margins and generally have more consistent earnings and profitability over time. These companies understand the importance of dividends and have demonstrated a commitment to shareholders. Well-established companies usually have a competitive advantage, which makes it difficult for competitors to take away market shares. Dividend growers demonstrate long-term staying power, are usually household names or leaders within their industry and have higher than average return-on-equity and other fundamental ratios.

Faith-Based Screening

A Christian Biblical view starts with the premise that everything belongs to Him. We are stewards of the assets that we have been entrusted to manage for Him, and we don't own it. 1 Chronicles 29:11-13 says, "Yours, Lord, is the greatness and the power and the glory and the majesty and the splendor, for everything in heaven and earth is yours. Yours, Lord, is the kingdom; you are exalted as head overall. Wealth and honor come from you; you are the ruler of all things. In your hands are strength and power to exalt and give strength to all. Now, our God, we give you thanks, and praise your glorious name."

Since Christians are stewards of His resources, they may choose to invest their money in a Biblical way. They would strive to obtain a return on their investment such as what Matthew 25:13 the Parable of the Talents describes. In addition, Christians should be in the world but not of the world and their investment process should be God pleasing, "Whatever you do in word or deed do all to the glory of God" and therefore should avoid investments that go against God's Word.

In order to align an investor's faith and Biblical beliefs, the HIS Envoy investment model negatively screens for eight business practices with over sixty sub screens to derive at our Faith-Based investing universe. We start with approximately 3,000 companies, and based on the Faith-Based screening process that excludes companies that receive revenue or profits within, have business dealing in, or are involved in the following eight areas; Abortion, Entertainment, Pornography, Lifestyle, Rights, Alcohol, Tobacco and Gambling. Approximately 375 companies violate one or more of these faith-based screening.

For Illustrative purposes only

The process of eliminating companies that violate the faith-based screening is the primary method of how the HIS Envoys Faith-Based Dividend Growth model aligns an investor's values with their investments.

Abortion Life begins at conception; therefore, as part of our process, we screen for and exclude companies that promote the Pro-Choice agenda, including advertisements or marketing companies. Additionally, companies that provide charitable aid or donations to non-profit organizations which include foundations that pay for abortions, provide emergency contraception pills, birth control pills and or pursue "reproductive freedom," like Planned Parenthood.

Entertainment Examples of negative business practices within the Entertainment industry that we screen for and exclude are companies that distribute anti-family programming through cable, pay-per-view (PPV) or video-on-demand channels. Furthermore, we exclude companies that distribute anti-family programming through the theaters or major motion pictures. Faith-based values are continually being assaulted by the entertainment industry; therefore, it makes sense not to invest in companies that deliberately promote sex, drugs, extreme violence and language.

Pornography As part of our Faith-Based screening process, we exclude companies that are involved in the pornographic industry. Examples would include companies that distribute pornographic films through cable, pay-per-view (PPV) or video-on-demand. Additionally, we exclude both online and brick and mortar companies that sell, market or distribute pornographic material. We believe that God created sex within the confines of marriage. The immoral sexual practices of pornography contradict the Bible, failing the standards that God has set forth in his Word.

The HIS-Envoy Faith-Based Growth model examines the investment universe and scores companies based upon our screening methodology with either a Pass or Fail. Companies that fail or miss the mark are eliminated, while the companies that pass the faith-based screening we further examine.

1 Faith Based Screening Example as of 10/01/2019

Relative Strength

Relative strength is a measurement of the price trend of a stock or other financial instruments compared to the price trend of a benchmark, stock, or industry. It is calculated by taking the price movement of one financial instrument over a period of time and dividing it by the price movement of another. It is a form of technical analysis, specifically, momentum investing, because companies or financial instruments that are outperforming their benchmark or industry tend to continue to outperform until sentiment changes. Relative strength is a type of ranking system in the financial markets. For instance, if there are more buyers that are bidding up the price of investment A than there are investors that are buying Investment B then investment A would outperform Investment B. This occurs when there is more demand for Investment A, as investors are indirectly stating that the outlook for Investment A is greater than Investment B.

In the following example, we compare Walmart’s (WMT) performance relative to the S&P 500. The performance for Walmart over this period was approximately 17%, which outperformed the S&P 500 that gained approximately 3% over the same period.

2 Relative Strength example of WMT VS S&P 500 4/22/2019-10/18/2019

Another way to compare the two is to utilize a ratio of WMT stock price compared to the S&P 500. When

the line is moving higher than WMT is outperforming, and when the line is declining, then WMT is underperforming. Once again, the chart shows that Walmart outperformed over the full period, but by charting a ratio you can easily see periods when WMT either outperformed or underperformed.

3Relative Strength ratio WMT vs S&P 500 4/22/2019-10/18/2019

By applying this process of relative strength, we rank investments by how well they are performing relative to one another. We can see investments and specific areas within the market, stocks, sectors or broad assets classes that are outperforming, and conversely what is currently out of favor and is underperforming. Our process routinely compares many securities to each other and ranks the results from strongest to weakest, similar to the illustration below where you can see Kellogg starting to outperform its peers.

POSITION	6/1/2001	1/1/2002	6/1/2002	1/1/2003
1	Microsoft	Walmart	Kellogg	Microsoft
2	Honda Motor Corp.	Johnson & Johnson	Honda Motor Corp.	Kellogg
3	Exxon	Microsoft	McDonalds	Berkshire Hathaway
4	Johnson & Johnson	Kellogg	Berkshire Hathaway	Johnson & Johnson
5	Berkshire Hathaway	Berkshire Hathaway	Johnson & Johnson	Exxon
6	Walmart	Honda Motor Corp.	Disney	S&P 500
7	Disney	S&P 500	Exxon	Disney
8	Kellogg	Exxon	Walmart	Walmart
9	S&P 500	McDonalds	S&P 500	Honda Motor Corp.
10	McDonalds	Disney	Microsoft	McDonalds

4Relative Strength Ranking example

Under normal market conditions, the HIS Envoy model seeks to invest in the fifty highest ranked financial instruments as ranked by our relative strength system. As investments with greater momentum surpass one or more of the existing fifty positions, we would purchase the higher-ranking security and replace the position that no longer meets the criteria of being ranked within the top fifty. This active management approach is very fluid as holdings are reviewed on an ongoing basis and replaced once they no longer meet the stated criteria.

Risk Control Measures

The earlier examples focused on securities that outperform to the upside, which occurs when the broad-

based market is in an uptrend and increasing in value. When markets decline, due to market uncertainty, economic slowdown or earnings decline, we tend to see financial instruments that are cyclical, or those that may be considered growth to underperform; whereas, defensive positions start to outperform due to more stable outlook of earnings or dividends. Consider that when markets are in decline, defensive positions may also decline; however, generally they tend to outperform

cyclical equities by falling less. Companies that are considered blue chip companies that pay a dividend, certain securities that are classified as lower volatility securities or companies within a specific sector are examples of defensive companies with lower Beta's that historically decline less than the broad market.

In a declining equity market, in addition to the rotation into defensive equity positions, traditional fixed income securities would start to outperform and move up on our relative strength ranking system due to the stability of fixed income, low correlation to the equity market, and investors becoming more conservative and reallocating their investments. When fixed income securities increase in ranking and breach the top fifty ranking, we would replace those that fell out of the top fifty with more conservative fixed income securities.

In addition to investing in defensive equity and fixed income positions, we include in the investible universe an Exchange Traded Fund that allows us to hedge equity positions. This hedge ETF seeks daily investment results that correspond to the inverse of the daily performance of the S&P 500. If markets were to decline, the inverse ETF would increase in value; conversely when markets increase, then the inverse would decline. Hedge positions have unique risk characteristics and are capped at 10% of the portfolio. Additionally, they are not meant as a long-term investment, rather they are used to hedge declining positions in the model. If equity markets were to decline to the point where the inverse of the S&P 500 was ranked within the top fifty of our relative strength system, the position would be purchased and when markets stabilized and started to rebound, the hedge ETF would be sold when he fell out of the top fifty.

From our relative strength process, we constitute our Faith-Based model with the fifty highest ranked positions and actively monitor and manage the list so that we are constantly reallocating assets to those that are ranked highest. Positions that fall out of the top fifty are sold, while those that make the ranking are purchased to take their place. Momentum may be concentrated in specific asset classes or industries with no regard to a broad-based allocation of large-cap, mid-cap and small-cap as traditional asset allocation models are constructed. Furthermore, the tactical portfolio can be skewed towards a higher allocation in equities and may have little to no allocation to commodities or fixed income while at times it may have a higher allocation to commodities or fixed income. Asset allocation is dynamic and may change from 100% equity allocation to 0% over time. Additionally, the model, at times, may invest in the international markets through ADR's when those positions are outperforming. Our relative strength analysis seeks positions that are outperforming, whether those positions are outperforming to the upside when markets are increasing in value or positions that are declining less than others when markets are declining.

By combining Faith-based screening with robust financial screens and relative strength assessments, the HIS Envoys Faith-Based Dividend Growth Model seeks to hold a portfolio of fundamentally sound companies, which are exhibiting high relative strength and positive trends at the time of purchase

HIS Envoys Group LLC. is a division of Harvest Investment Services LLC.

Harvest Investment Services, LLC., is a SEC registered investment advisory firm. We manage numerous Faith-Based and Non-Faith-Based global tactical investment models by utilizing several risk-control measures that are designed to “Harvest Gains and Limit Losses.”

Harvest Investment Services is a Stewardship Company. Ultimately, we recognize that everything we’ve been entrusted with belongs to God. We, at HIS, are reminded of that each day; all we have is HIS. HIS exists to help individuals and families become better stewards of the financial resources they have been entrusted with.

As fiduciaries, our goal is to provide investment options that employ downside risk-control tools as investors align their portfolios with a Biblical worldview.

As a Stewardship Company, we are committed to “Business Excellence with Kingdom Purpose” and will be donating from the profits of this Faith-Based Investment model to fund Bible translation to the un-reached people groups of the world.

We believe that we serve a higher purpose than simply to effectively manage money. We believe that every area of our lives – Time, Talent & Treasure – ought to be submitted to the God we serve for His glory alone.

Disclosures. Past performance is no guarantee of future results. Information provided in this report is for educational and illustrative purposes only and should not be construed as individualized investment advice. The investment or strategy discussed is not suitable for all investors. All investments involve risk, including loss of principal. In addition to the normal risk associated with equity investing, investments in technology, small and mid-cap companies are narrowly focused investments that exhibit higher volatility and are less readily marketable than investments in larger companies. Also, international investments involve special risk consideration, which includes currency fluctuations, lower liquidity, economic and political risk. Principal values and investments returns are neither guaranteed nor issued by, guaranteed by, or obligations of a bank, savings and loan, or credit union; and are not insured or guaranteed by the FDIC, SIPC, NCUSIF or any other agency. Current holdings are subject to change at any time without notice

The S&P 500, MidCap 400 and SmallCap 600 indexes are an unmanaged group of securities considered to be representative of their market cap weighted asset class stock. Their performance is not reflective of the performance of any specific investment. Investments cannot be made directly into an index.

Inverse ETFs seek to deliver the opposite performance of the index or benchmark they track. For example, if the market as measured by the S&P 500 is down 1% the inverse ETF would be positive by approximately 1%. Inverse ETFs often are marketed as a way for investors to profit from or hedge exposure to declining markets. It is important to remember that historically the market does move higher over the intermediate to long term.

Definition: Relative Strength: Relative strength is a technique used in momentum investing. It consists of investing in securities that have performed well, relative to their market or benchmark. Mean: Arithmetic average. Standard Deviation is a measure of how much an investment's returns can vary from its average return. It is a measure of volatility and in turn, risk. Alpha is an indication of how much an investment outperforms or underperforms on a risk-adjusted basis relative to its benchmark. Beta is a measure of price variability relative to the market. Sharpe Ratio is a measure of excess reward per unit of volatility. Yield is the annual dividend payment to shareholders divided by the stock price * 100 to be expressed as a percentage.

The average current yield of the portfolio is the weighted average of the distribution and current yields of the securities in the model portfolio at the time of writing. Distribution yield is the anticipated annual distribution as a percentage of the current price of the security. These distributions are not guaranteed and can fluctuate. The average current yield is not the anticipated annual return of the portfolio. The total annual return of the portfolio is a combination of annual distributions and price fluctuation which can be positive or negative over the course of the one year. The average current yield will change over time. There can be no guarantee the portfolio will pay the average yield over and period of time. This yield is gross of all fees. 30-day SEC yield is calculated by dividing the net investment income per share earned during the most recent 30-day period by the maximum offering price per share on the last day of the period

This Model portfolio is being offered through the Advisory Services offered through Harvest Investment Services, LLC, a Registered Investment Advisor.
